StudyForge Test Fixture

This is a synthetic two-page PDF used by the unit tests for SF-3.

It exists so that tests/test_extract.py can run deterministically on a clean clone, without depending on any course material.

Page one contains several lines of plain text so that extraction returns a non-empty string for this page.

Second Page

The second page confirms that page numbering is one-based and that each page is returned as a separate entry in document order.

If extraction is working, page one maps to {"page": 1} and this page maps to {"page": 2}.
